

YOUR DOCK AND YOU

These aren't the old days when it comes to boat docks. They aren't the heavy, wooden behemoths they once were. When it comes to Wickcraft [docks and piers](#), the company has been offering stability and consistency since 1954. Wickcraft's docks are built with easy-to-assemble steel pieces with wood or vinyl decking. They work well with the time pressures owners are facing, they are easy to keep up and work well wherever you want to put them.

Wickcraft's docks look stylish, are sturdy and give you a firm foundation to walk on. You will never have a shaky walk on a Wickcraft deck, thanks to the steel frame structure holding it up. The firm support will always be with you with a Wickcraft.

[Boat dock systems](#) are made up of just more than docks and walkways. They can also be made of an entire boardwalk, with piers coming out of the walkway all along its path. Because of Wickcraft's design and structure, you can have a layout like this or any other. If you choose to have piers that are not on the water, go ahead. These piers and walkways can just be for walking and not even near the water.

The ease of the assembly of these boat docks, with their sectional walkways and affordable prices allow just about anyone who wants a one to be able to add it. Wickcraft's system is a cinch for an eager do-it-yourselfer. Permanent installations don't always work for home owners. If you want to get a longer life out of your dock, you will want to be able to disassemble it during poor weather and store it away.

Wickcraft has solved the problem of how to take apart and put together a dock with the same ease. The posi-lock system that the company developed is just what customers are looking for in terms of ease of use. The Wickcraft system allows for the installation by a single person, whether they are assembling a dock or a walkway. All somebody needs to do to put together a dock over the water is have a rope to help with the pieces.

The way these docks and walkways are built also helps people get to areas they might not have been able to reach before. That includes people in wheelchairs who want to follow the walkways out onto the property. The walkways can also be used around porches and pools as well as near the water. A customer can take a new boat dock and attach it to an old one, or join a bunch of docks together, along with some walkways. There are many possibilities.

In the end, you just need to decide what's right for you. You definitely don't need to put off the addition of a dock because putting it together is too tough. Thanks to Wickcraft, it's not. When your boat is in the water one of the best things you can do for it is have it next to a Wickcraft dock.

About the Author
