

## Web Hosting Advice

A web host is a service provider that places your web site on a computer which is connected to the internet. The term for this 'computer' is called a server.

If you plan to own a new website, you will need to host your website on a web server. When your website goes live on the web server, online users can then browse your website on the Internet. Company that provides the web servers to host your website is called web hosting providers.

A web hosting provider will typically have a fast connection to the Internet housed in a physical building called 'data center' and they may host thousands of web sites on many servers. The web host essentially rents out space to you so that you can get your website up on the world wide web.

Whether you are looking for business web hosting for a corporate site or cheap web hosting for a personal site, there are numerous web hosting provider that will help you to accomplish for the same. These web hosting services are an Internet based service offering online arrangements to store data, descriptions through Web. There are varied numbers of web hosting companies among which some provide free web hosting service while some charges a fee.

Webhostingadvice.net offers advice for people of levels to assist in the process of choosing the best web hosting provider. Given the large amount of companies offering similar web hosting services, choosing a web host can be hard.

Webhostingadvice.net has conveniently selected the TOP 10 most affordable web hosts and placed them in a comparison chart for your benefit. One of the most important factors is bandwidth or transfer. Bandwidth or transfer is measured by multiplying the size of your site with the number of visitors you get a month. Our experience with web hosts is that even cheap web hosting services will provide you with more than enough bandwidth or transfer.

Disk space is a key factor which you will encounter right at the beginning of your journey onto the web. Bigger sites which contain heavy files (sound files, images etc.) will require more disk space than smaller, simpler sites. Most sites are between 10-20kb which is more than enough for nearly any web hosting provider.

Probably the most important concern for a beginner is support. Before choosing a web host, make sure that you are comfortable with level of support provided. A cheap web host may only offer email support whilst a more sophisticated yet affordable web hosting provider will provide live chat, online tutorials, 24 hour phone support and forums. For those intending to conduct business online, immediate support is crucial – it can make or break your online business.

In addition to the above factors, you cannot avoid doing your own research. We encourage you to visit each host and analyze their services carefully. Many hosts offer a 30 day free trial period. This is a great way to test their service and make sure that it suits the needs of your website. Another suggestion is to speak to them personally and ask them the right questions about their service. You will be able to tell pretty quickly whether the particular host is responsive enough to your needs and is willing to accompany you in your online experience.

The web hosts that we've selected to put in the chart are the ones we believe are the all around best web hosting providers when taking all specifications into consideration including customer service and feedback. From our experience with these web hosts, they won't let you down.
