

Reinstalling Windows without any data loss.

That's a well-known fact: the Windows operating system becomes unstable with time. It regularly freezes, acquires a lot of useless functions and trash in the registry. Specialists recommend reinstalling Windows from scratch not less than once a year. Most users think of reinstalling Windows as a long, routine process usually accompanied by formatting the hard disk. Generally, that's the way it is - if you do it manually and in an old-fashioned way. It's the 21st century already and it's high time to forget about manual routine work and data loss! Delegate Windows reinstallation to a professional in the field of [automating software installation](#) - Almeza MultiSet!

There are two modes of [reinstalling Windows](#): repairing Windows (installing above the current version of the operating system) or reinstalling it completely. All current settings are preserved if you repair it, while the complete reinstallation results in a truly new Windows version. Almeza MultiSet can reinstall Windows in both modes. Moreover, in case of the complete reinstallation, MultiSet can automatically install all necessary software after it automatically installs the operating system itself: drivers, service packs, software localization packages, server software, etc. After the applications are installed, every program is automatically configured. Also, it is possible to automatically tune the Windows operating system.

Thus, no matter what mode you reinstall Windows in, the final result achieved by Almeza MultiSet will be the same: new operating system version + installed drivers + properly configured set of necessary software. No need to format the hard disk. No data losses.

The work of Almeza MultiSet results in a distribution package ready for the automatic Windows and software installation. Besides, Almeza MultiSet can create bootable CDs/DVDs. Such disks can be used as a rescue means after a system crash. To completely restore the system, you will only have to insert such a disk into the CD/DVD drive and configure BIOS to boot from this device. The system will be restored in less than 40 minutes!

Almeza MultiSet will be very useful for system administrators who maintain a lot of computers. MultiSet can [automatically install](#) software sets remotely via the local area network. Thus, you do not have to come to each computer personally in order to update some software, you can completely delegate it to Almeza MultiSet!

With Almeza MultiSet, reinstalling Windows will no longer scare you. Get busy with your own interesting things during the automatic installation and enjoy the automation!

Relax more, work less, live interestingly!
