

## Software to Copy Copyrighted DVDs - The Good and the Bad

Data duplication is the backbone of the digital world. There are countless formats in which media and data can be stored. Therefore, software to copy DVDs is an essential part of the daily digital world. Due to the vast amount of formats of media and data, all copier software should also be a good enough converter.

Therefore, the copy software should recognize and support media and data of various formats. DVD cloning software are not only cloning software, but they also have compression and decompression of data capabilities. Other features of DVD copying software are automatic chapter marking and compatibility with a wide range of copier hardware.

Like any software, duplication software should be light and easy to use. Therefore, the general interface of the software should concentrate on usability and basic lightness of colors and other such factors.

Copy software also have copy bonus footage, subtitles, audio, language and menus. Some copy software also offers the 'movie only' option, which copies the entire movie apart from the other files on the DVD, which we can do without.

Most software tools that copy DVDs have a point and click interface, and have a minimum of two or three steps at the most. Basically, copy software is made while keeping the basic computer user as well as the advanced computer user in mind. Therefore, along with the advanced copy options, copy software also has the simple copy option.

Some of the best software tools that make DVD copies are a single click system. The best copy software comes in handy while transferring the data or media from a larger format into the normal 4.9 GB DVD.

One of the simplest DVD copier software available is the 'LG 1Click'. Standing true to its name, it offers the user the ability to copy DVDs with a single click. The software does not offer support for advanced options, and therefore will not a great buy for advanced users.

Another good DVD burner software is the DVD Cloner 4. One USP of this software is that it can decrypt CSS encryption automatically and does not require another download for the same.

Some of the formats one can convert using DVD cloning software are: DVD to AVI, DVD to MPEG and DVD to SVCD

There are a lot of reviews about the best DVD copier software on the Internet. One should do a proper search and decide which product is the best for them.
