

## Find Duplicate Files? - That's Simple!

Once all things come to an end. Your new memory disc is no exception. But before you buy yourself another memory disc, it may be a good idea to make a bout of cleaning at your current hard disk and remove all duplicates. Maybe after a thorough cleaning the shortage of free space will not be as severe. You should know that after having downloaded much information from the Internet or copied it from one folder to another, you get a huge number of duplicate files left here and there - duplicate music. They are of no use and merely waste the space of your hard disk. It is essential to delete copies of files occasionally.

And here you have a choice: either to remove duplicate files yourself, or to apply specially designed software - remove duplicate files. Searching for duplicates yourself takes way too much time and effort; it is merely tiresome. The much simpler way is to apply one of the targeted utilities, which will execute the bigger part of work for you. Therefore, if you are ready for your memory disc revision, all you have to do is to choose the most convenient tool. This type of utilities is called duplicate file finder. It locates copies of files, zero-size files and same filenames on your PC. In accordance with the current pre-settings, it can remove or not the search-results. Duplicate remover is very simple to use, but at the same time it is also a very helpful tool. Applying duplicate finder you may search for duplicate music files, duplicate images and even video.

You should note that duplicate file finder locates not only exact duplicates, but also duplicate pictures and duplicate music. Which is more, it allows even to search fuzzy match, if certain files have little difference. By making certain very uncomplicated settings you might leave out exact folders from scanning.

The search results for file duplicates are not withdrawn as the searching progresses. You will see them only after the scanning has been finished. While the duplicate finder is working, you will watch the task progressing in the status line. You will be able to also see here the quantity of already scanned files.

The final scan results will be shown in the form of a list. It is simple to see which files are duplicate files: they are marked in the list (very often every other pair of copies of files is marked with a bright color).

Thus, using duplicate file remover will keep you a lot of time and increase the amount of available space on memory discs. No matter how time-saving this or that duplicate remover is, always remember - they are very reliable, but do not rely on them hundred percent. Here is a good advice: you better work with utilities of the type with a clear head and take your patience. For it might put some very important documents, images or music files on the list of duplicates even despite the fact that there is one copy on your PC. At the same time, if you use it correctly and carefully - it will ease information bout of cleaning for you greatly.
