Deleting a document by accident is easy. That can happen to anyone, and happens regularly to everyone who's using their computer for anything but computer games. Thanks to the intuitive, easy-to-use interface of Microsoft Windows, it is now very easy to format a hard disk. The problem is, how do you un-format it? The all-mighty and user-friendly Windows won't do anything about it.

Even if you are extra-cautious and don't usually click "OK" when asked to agree with the total loss of your data, data corruption and hard drive crashes tend to happen regardless. Sometimes the corruption is so severe that you cannot even access your disk or partition, let alone read your files.

Did you experience a hard drive failure? No access to disks or partitions? Suspecting virus attack or hardware failure? Stop messing around and call for an ambulance! [SoftAmbulance Partition Doctor](#) restores your hard drives health and cures your files and data completely automatically. It won't require you to read any "Data Recovery for Dummies" books or take a college class learning how to fix your PC. SoftAmbulance Partition Doctor will just ask you which disk or what files you need recovered, and works completely automatically after that, pursuing complete restoration of corrupt files and data.

Under the hood SoftAmbulance Partition Doctor has a complex and powerful data recovery engine. It's not just another free undelete tool or a clone of Windows check-disk. Being a much more complex and way more robust recovery product, SoftAmbulance Partition Doctor combines check-disk and undelete functionality, but does it much better and more reliably.
