

Perfect: Honeycomb Shades – Cellular Shades

Is the sunlight welcome in your room? Take a second to think about it. Well, let me bring a ray of light into your thoughts. There are mornings when you want to snooze, times when you need privacy, or need to dim the glare on your TV, aren't there? Then our little miracle comes in handy: cellular shades. To be more precise: honeycomb cellular shades or simply cellular blinds.

Made out of fine fabric, honeycomb shades provide your room with all the privacy you need and replace the old-fashioned window curtains in style and with elegance like no other shade can provide. With a wide range of soft colors, cellular shades can match any wallpaper, or can be in the same tone as your furniture. They are also easy to fit, since you can design and then order the exact size of the cellular shades you need to cover your windows with. Honeycomb shades come in three categories: pleat size, insulating level and light filtration.

And these are not the only choices you get when you order a honeycomb shade. Even if a single layer of cells will not fade your furniture in full-sun locations, you can also order the double cell or the blackout honeycomb shade. The double layer shades will provide even greater light filtering, as well as insulating power, from either heat or cold. The blackout cellular shades have a lining that will completely eliminate light.

With a white back facing the window and outside the cellular shades will provide an elegant consistent appearance for those who get to admire your windows in passing.

Another great feature of the honeycomb cellular shades are the different lift systems. You can either pick a cord lifting system or a cordless lift system. It all depends on the size of the shades you need for your windows. The cordless system is limited at certain width and drop. But it can be the perfect choice for those who have children or pets, as a safety measure. The cord lifting system comes in different versions. The standard pull, the retractable cord to avoid dangling strings, or the continuous cord loop for extra large window applications.

As a bonus to all the benefits we have uncovered so far, honeycomb cells offer a noise reduction property as long as they are properly placed. And when it comes to unblocking and enjoying your view, most cellular shades obstruct a very small part of your window, when fully raised.

And since you can save a lot of money and time by ordering online, your house is just a click away from the look you've always admired in decorating magazines. Take your time and make up your mind on the perfect honeycomb shade that is right for you. You will not be disappointed and you will soon find it hard to remember the time of the curtains.
