

## PHP Training Program Of Indus Net Academy

PHP is a general-purpose scripting language for writing server-side Web applications. An abbreviated form of PHP: Hypertext Preprocessor, PHP is a widely used open source language for web development and can be used in collaboration with HTML language. Together with MySQL, PHP offers great versatility in web applications development and both of them work in WAMP platform (Windows-Apache-MySQL-PHP). MySQL is an open source database management system. These two technologies provide a very powerful platform of database-driven Web-applications.

The recent boom in Information Technology in the eastern part of the country, especially in Kolkata has created a strong demand for professionals trained and conversant in PHP and MySQL. Software companies specializing in web development and web applications are recruiting PHP developers in larger numbers. However, there remains a huge gap between the demand and the supply of engineers and software professionals trained in PHP and MySQL applications. The current supply of PHP professionals is far from the real demand in the industry and the potential for growth remains to be utilized completely.

With the aim of providing PHP MySQL Training to candidates aspiring to make great careers in web technologies, Indus Net Academy (INA) has launched the ACE Web Developer course focusing on real applications of these technologies. This course is perfectly tailored for the fresher as well as candidates from other programming fields who are interested to learn PHP programming and aspiring for a lucrative career in web-development. The ACE Web Developer course, which also includes live projects, will help you to become a skilled PHP programmer.

'ACE Web Developer' is a hands-on training course that comprises 30% classroom lectures and 70% practical and the main stress is on "learn by doing". The course teaches the learners everything they need to build effective data-driven Websites. In this advance training the students will gain expertise encompassing several significant areas that includes PHP Programming Fundamentals, Strings Functions, Arrays Functions, HTML/CSS and Forms, File Handling and Email Handling in PHP, Object Oriented PHP and Session Handling etc. The ACE Web Developer course also emphasizes on MySQL Basics, Extended PHP, OOPS in PHP 5, Exception handling in PHP 5, XML / SOAP and many more.

A student must meet certain prerequisites to join the course. For admission in the ACE Web Developer program one must be a Graduate in any discipline with 50% mark throughout Secondary, Higher Secondary and Graduation. A reasonable understanding and ability to communicate in English is preferable. Fluency in HTML will be an added advantage for all MySQL and PHP training students. Those interested to join the program can go through the course details available in the website of the Academy. The duration of the course is 20 weeks which is divided as 3 days x 2 hours every week. Students will also have practicing sessions at the Academy. The class-schedule and the practicing session are flexible for the convenience of the students.

The education strategy of Indus Net Academy has been planned by the real experts in this field with several years of experience. The methodology adopted in delivering the ACE Web Developer course are based on the methods being adopted in leading Universities and software organizations. The faculty members are team leaders and senior programmers who possess years of hands on experiences on the subject as well as knowledge about the latest versions of the technologies. Small batches with one-to-one interaction will maximize the understanding of individual students and will enhance their learning experience. In addition, Visual Concept Session (VCS), Do-It-Yourself Labs and Research & Development are included in the course that matures the skill of a novice.
