

You Can Get Rich with Progressive Slots

Progressive slot machines, both land based and online casinos offer jackpots that are much more substantially larger than usual. In some of the most entertaining cases these jackpots had such a high payout it is like hitting the lottery. A life changing event that will forever live on in your family.

Lets face it, everyone who has ever started playing a slot has thought about hitting the big prize, at least once in your life. It's tempting. Here's why you should play progressive slots. When you play you are getting the advantage of the normal payouts for the slots and the remote possibility of hitting the progressive. The entertainment value is just as good with the additional possible pay off of the progressive jackpot slot payoff. If you don't have a warm fuzzy feeling in your stomach now, then read one for more info on the progressive slots.

Just because the odds of hitting the Progressive slots are astronomical that you think you'll never get it. There's always a chance, but you will NOT win if you don't play. That's pretty much a zero percent possibility of not getting it if you don't play the progressive slots.

The progressive slots are designed like a network of slots all interconnected to farm the same information to help accelerate the progressive jackpot to a higher value faster. So a percentage of all of the money played on each machine determines how much money will be one by the progressive jackpot. The amount of money from each machine contributing to the progressive jackpot slots builds until someone eventually wins it. Depending on where your at, online casino or land based casino, this could take some considerable time. Usually by this time the winning amount is large, very, very large.

There are three types of progressive jackpots. Here's a brief list of all three and their basic setup.

(1) Stand Alone Progressive Slots

The stand alone progressive Slot is exactly what the name suggests. It is a stand alone unit that does not pull contributions from other machines. It only takes a percentage of the incoming money from the same machine, itself. The prize amount for the jackpot is almost always lower than the grouped or networked versions because there's less money coming in overall. It usually takes a considerable amount of time to build up a prize big enough to make you ubber rich. Remember that similar machines in the same area on the same type of progressive slot system will have varying top prizes. I suggest playing the ones with the largest prizes.

(2) In-House Progressive Slots

These are a casino slot machines that are owned by one particular casino. The networking is done through their own system network. The moneys contributed to the progressive jackpot are pooled from the same slots in the same casino. There is no casino crossing to other outside groups. These prizes can grow considerable larger than the stand alone progressive slots, but not as large as the wide area progressive slots seen below.

(3) Wide Area Progressive Slots

These jackpots for the wide area progressive slots are the largest in the industry of casinos. The slot makers themselves install the slot machines and pool money from all of the same class machines from all over Las Vegas from many casinos that are not even related. This makes the jackpot absolutely astronomical. The casinos usually share a percentage of the slots with the manufacturers, but the games are owned by the manufacturers. Now you know that you could win more money playing progressive slots. You now know that the Wide Area Progressive slots pay out much more than the Stand Alone Progressive Slots. The same amount of entertaining fun is found in all, but if you want to play for the big money I suggest playing the Wide Area Progressive Slots.
