

Pros and Cons of Web Based Software's

Web based software is kind of a specific and relatively class of [software development](#). In this system, all software components usually reside on a web server. In this fast moving world, the importance of such software is needed at every step to bring better efficiency and effectively in the work. When you have decided to go for web based software, you better know about the different pros and cons to increase your satisfaction to the next level.

Some pros & cons of web based software's are given below:

Pros:

Flexibility: By using web based softwares, a user can have the facility to avail 24x7 flexibility to access all the necessary tools or data required on a desktop, notebook, tablet, or compatible smart phone. You can continue the work any time and anywhere.

Protection: Web based software provides you complete protection against the worry about backing up files or losing important data to hardware theft. It is a kind of updated tool. Just log into the system and download the latest version and avail the full tech support.

Economical: Using these software can be economical as you actually do not have to spend money on maintenance costs like in traditional software. You can get the latest versions without much cost and people can easily access to your services, saving money in formulating different marketing strategies.

Timeliness: Such software saves a great deal of time for a user as you do not need to download the latest version. Also, you can use it anywhere you want to, saving your valuable time and money as well.

Cons:

Cost over time: It is true that web based software helps you to lower down the overall budget as a user does not have to maintain a local office network. In practical, online services are usually sold on a monthly or yearly subscription mode. The cost of subscription can easily surpass the price of software.

Internet Dependency: Since everything is internet based, a user feel troubled when the internet fails or not working properly. So, one has to make sure that the speed of the internet works really fine.

Times to Adept: Working or web-based software is quite different from normal working. Sometimes, it needs time to get used of this.
