

## Treaties would give all power to U.N.

One thing that can be said about the weather is that it is changeable. The changes in climate during the next century cannot be predicted.

Al Gore advises that the world will end in about 10 years, and his doomsday prognostications blame man. He gives a slide show, he lectures and has written books on the need to combat global warming. He is not a scientist. He is a globalist, and they want power for the United Nations so they can rule the governments of the world. Environmental issues are manipulated for political purposes. The people's control of government is being lost. The people cannot control the destiny of the nation if they allow government officials and globalists to become too powerful.

World government can dominate the political systems and the economies of the world - real and dangerous powers for the elites of the world.

The United States should not sign the Kyoto Protocol. Climate alarmism is used to frighten countries into signing. It was signed by Clinton and Gore, but rejected by Reagan and Congress. Third World countries are exempt from regulations plus India, China, Brazil, Korea and others. They can pollute with no restrictions. United States has restrictions. This is discrimination. The United States should make its own laws. Kyoto will give world power to the United States.

Two other frightening treaties should not be signed by our nation. Carter negotiated "The Law of the Sea" treaty. Reagan rejected it. It will destroy our nation's authority. The "North American Union" plans are to build a \$183-billion super highway from Mexico to Canada through our nation. It is to be built for foreign trucks and trains. It will be partially controlled by foreign companies and Mexico. These plans will be disastrous for our great nation. They will take our future.
