

Do u know what is Viagra? By TerePharmacy.com

Viagra is a drug used to treat male erectile dysfunction (impotence) also called impotence, developed by the pharmaceutical company Pfizer. The generic name for this compound is sildenafil citrate. VIAGRA® is the #1 prescribed prescription for the condition known as ED (Erectile Dysfunction). Most people have lots of questions -- from how it's used and how it affects a couple's relationship, to whether women can benefit from it. So here are the facts about what Viagra can do and what it can't do.

Viagra is by far the most widely used treatment for ED. In the United States, more than 5 million men just like you have turned to Viagra to improve their sexual function. Doctors in the United States have prescribed Viagra more than 16 million times. And Viagra is available in more than 90 countries worldwide

Up to 82% of patients who take Viagra experience an improvement in their erections. That means more than 4 out of every 5 couples who try Viagra benefit from it.

Uses

This medication is used to treat male sexual function problems (erection problems).

How to take this medication

Viagra is taken by mouth as needed between four hours and one-half hour before sexual activity (about one hour before is most effective). Take only as directed, usually once daily as needed. Sildenafil works along with sexual stimulation to help achieve an erection.

Side Effects Of Viagra

With Viagra , the most common side effects are Headache, facial, flushing, upset stomach, nasal stuffiness, diarrhea and dizziness might occur. If these effects persist or worsen, notify your doctor promptly. Viagra may also briefly cause bluish or blurred vision, or sensitivity to light.

Precautions

Before using Viagra, tell your doctor your medical history, including any allergies (especially drug allergies), any penis conditions such as fibrosis/scarring, history of painful/prolonged erection (priapism), sickle cell anemia, blood system cancers (such as leukemia or myeloma), or Peyronie's disease, eye problems (retina diseases). kidney or liver disease, bleeding disorders or active stomach ulcers, heart diseases, stroke or severe high or low blood pressure. Limit alcohol intake, as it may aggravate side effects of Viagra. To avoid dizziness and lightheadedness when rising from a seated or lying position, get up slowly. The elderly may be more sensitive to the side effects of this drug, therefore caution is advised in this group.

Notes

Do not share Viagra with others, since they may have a problem that is not effectively treated by this drug. Use of this drug does not protect against sexually transmitted diseases (e.g., HIV, Hepatitis B, gonorrhea).

Storage

Store at room temperature between 59 and 86 degrees F (15-30 degrees C) away from light and moisture. Keep this and all medications out of the reach of children.

Effective dosage

25mg to 100mg taken once per day between 0.5 to 4 hours before sexual intercourse.
