

VaultMate - Integrated Security Solutions

Motivation

In a high-tech world, computer interactions take a special place in our lives. Providing enormous possibilities and new horizons we can hardly imagine our lives without computers and the Internet.

Unfortunately, these advances and benefits come with privacy and information vulnerabilities. Every year larger amounts of electronic information has to be managed: projects and novel ideas, important documents and letters, web accounts, passwords and pin codes, credit cards and bank accounts, contact information, etc. Securing this type of information is extremely important for the overall security of your business and transactions.

We are proud to introduce VaultMate, a powerful software program for secure information management. This comfortable-to-use software product will incorporate strong encryption protection into your everyday computer life.

Integrated Security Solutions

VaultMate is powerful, and a user friendly software program for the secure management and storage of important information and documents. The age of electronic documentation, and the need to implement easy to use solutions for a variety of computer activities and projects, without sacrificing security, have driven the creators of VaultMate to come up with an all inclusive security program.

* Documents Vault - Organizes your files and documents; making work flow more efficiently. The simple folder type filing structure of VaultMate organizes files quickly, and easily, by storing all paperless documents as one encrypted database file.

* Passwords and Sensitive Information Manager - Our unique password organizer includes a built in Safe Password Generator, Drag'n'Paste Internet Forms Filler and an imbedded 256-bit Advanced Encryption Standard (AES) module that will make VaultMate your irreplaceable security assistant. It eliminates the worry about authentication privacy; allows the use of extremely strong security codes anywhere without running the risk of forgetting a hard-to-remember password. By keeping your passwords stored in VaultMate, no one can access your vault but you.

* Work Journal - Gives you the ability to keep and organize records of the day's business proceedings and events securely. Easily exports to Hyper-Text Format (HTML) and publishing to your web-server.

* Personal Diary - Organize your personal records of daily events, appointments, observations, etc. Your diary management is conveniently accessible and extremely secure.

Highlights:

- * Single-file database
- * Strong 256 bits AES encryption
- * Integrated Documents Management System
- * Database Optimizer
- * Export to HTML Format
- * Removable Device Mobility
- * External File Encryptor
- * Safe Password generator
- * Drag-and-Paste
- * Automatic Form Filler
- Check out how it works: <http://www.VaultMate.com/FormFillDemo.html>
- * Flexible User Interface
- * and more..

VaultMate is a convenient application for secure management of the variety confidential data: documents and files of any types, personal information such as bank accounts, credit cards, PIN-codes, website login information etc. VaultMate provides a number of predefined templates for commonly used records allowing you easy data input.

All information you store in VaultMate is saved as a special encrypted single database. Use of strong 256 bit AES encryption ensures safety of your

files.

Built-in VaultMate password generator allows you creating reliable passwords, which you can use elsewhere (website logins, accounts and other pieces of your information). Advanced Random Number Generator chooses random combination of case-sensitive letters, numbers, and characters. Use copy and paste option to apply generated password to website or program.

Generated passwords are stored in your electronic vault which is accessible with master password, only you know and able to access, edit, move or rename your files.

VaultMate has password protected lock mode, preventing unauthorized access to your data when you are away from your computer. We recommend using lock mode for ensured security.

Remove the question mark from your private data let it be only yours!
