

Nametags And Deskplates – Identity Proofs With Style!

Nametags And Desk plates – Badges That You Will Always Want To Show!

Nametags are basically a way to represent yourself and sometimes your company. And what better way to do it then getting a nametag or desk plate that is attractive, fashionable and classy.

Nametags and desk plates come in a variety of materials and colors. In every material of nametags, you can get many different shades and colors that give you the liberty to select and make the right choice regarding it. The two basic types of nametags are metal and plastic. Metal nametags are made from top quality aluminum strips. This aluminum is light in weight and very durable. Another one is the metal nametag with epoxy.

Epoxy is basically a type of acrylic coating that is put over a metal nametag that protects the metal from scratches and harmful UV rays that deteriorate a metal. One way that is used to protect a metal for a longer period is the system of putting a border on the metal. Bordering is the process of cutting another metal strip a little bigger than the original nametag. The most popular metal nametags that are being used nowadays are the metal nametags with epoxy and border together which gives it an elegant look.

To make plastic nametags, the best quality plastic is used for this purpose. Plastic nametags give you the freedom to shape it the way you want i.e. according to your company logo or something. They are affordable and easy to maintain. Plastic nametags come in two combination colors.

One is the base or core and the second one is the top color. For example, the background of a nametag is black and the writing is in white or silver. Therefore, the black background is the top color and the writing is the core color because the core color shows only when anything is engraved in it such as in this case is the writing.

Nametags are incomplete without a fastener. Just like how paper is incomplete without paper. Now, what are fasteners? Fasteners are usually used to hold a nametag when put on. Pins, magnets, pocket clips, clutch back and clips are some of the types of fasteners that are used these days on nametags. Clutch backs are mainly used on clothes that don't require the nametag to be removed very often such as duty uniforms. Pocket clips easy slide on to your pocket and is easy to remove and does not damage your clothes.

Nametag solves the problem of identity on your clothes. But, what would you do for a tag on your desk? Simple, just get a desk plate for this purpose. Desk plates are also available in a wide range. Walnut, wood, metal, piano finish, marble and glass are the different types of desk plates in the market.

Desk plates usually have a person's name, designation or highest degree of qualification. Black marble desk plates are very popular products for offices. Black shows power, class and elegance.
